Sodium-glucose Co-transporter (SGLT) Inhibitors and Combinations Step Therapy with Quantity Limit Program Summary

Florida Blue/Truli does not accept the use of samples to satisfy prerequisite requirements in any of the step therapy or prior authorization programs. Samples would also include any type of prescription or copay assistance rendered to the patient by the drug manufacturer or any other organization that would allow the patient to get the drug without a paid claim through billing Florida Blue/Truli.

For a complete list of Florida Blue step therapy programs, please refer to the following link:

FDA LABELED INDICATIONS AND DOSAGE

Agent(s)	FDA Indication(s)	Notes	Ref#
Brenzavvy®, Bexagliflozin Tablet	An adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus Limitation of Use: Not recommended in patients with type 1 diabetes mellitus. May increase the risk of diabetic ketoacidosis in these patients.		19
Farxiga®, Dapagliflozin Tablet	As an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus To reduce the risk of hospitalization for heart failure in adults with type 2 diabetes mellitus and established cardiovascular disease or multiple cardiovascular risk factor To reduce the risk of hospitalization for heart failure in adults with type 2 diabetes mellitus and either established cardiovascular disease or multiple cardiovascular risk factors. To reduce the risk of sustained eGFR decline, end stage kidney disease, cardiovascular death, and hospitalization for heart failure in adults with chronic kidney disease at risk of progression Limitations of Use: • Not recommended for use to improve glycemic control in patients with type 1 diabetes mellitus. • Not recommended for use to improve glycemic control in adults with type 2 diabetes mellitus with an eGFR less than 45 mL/min/1.73 m^2. Farxiga is likely to be ineffective in this setting based upon its mechanism of action • Not recommended for the treatment of chronic kidney disease in patients with polycystic kidney disease or patients requiring or with a recent history of immunosuppressive therapy for the		2

Agent(s)	FDA Indication(s)	Notes	Ref#
	treatment of kidney disease. Farxiga is not expected to be effective in these populations.		
Glyxambi® (empagliflozin /linagliptin) Tablet	To improve glycemic control in adults with type 2 diabetes mellitus. To reduce the risk of cardiovascular death in adults with type 2 diabetes mellitus and established cardiovascular disease. Limitations of Use: • Not recommended in patients with type 1 diabetes mellitus. It may increase the risk of diabetic ketoacidosis in these patients. Has not been studied in patients with a history of pancreatitis. • Not recommended for use to improve glycemic control in adults with type 2 diabetes mellitus with an eGFR less than 30 mL/min/1.73 m^2.	DPP-4 Inhibitor Combinations	14
Inpefa® (sotagliflozin) Tablet	To reduce the risk of cardiovascular death, hospitalization for heart failure, and urgent heart failure visit in adults with: • heart failure or • type 2 diabetes mellitus, chronic kidney disease, and other cardiovascular risk factors		18
Invokamet® (canagliflozin/ metformin) Tablet	As an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus Canagliflozin is indicated to reduce the risk of major adverse cardiovascular events in adults with type 2 diabetes mellitus and established cardiovascular disease Canagliflozin is indicated to reduce the risk of end-stage kidney disease, doubling of serum creatinine, cardiovascular death, and hospitalization for heart failure in adults with type 2 diabetes mellitus and diabetic nephropathy with albuminuria Limitations of Use: Not recommended for use to improve glycemic control in patients with type 1 diabetes mellitus		3
Invokamet® XR (canagliflozin/ metformin ER) Tablet	As an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus Canagliflozin is indicated to reduce the risk of major adverse cardiovascular events in adults with type 2 diabetes and established cardiovascular disease Canagliflozin is indicated to reduce the risk of end-stage kidney disease, doubling of serum creatinine, cardiovascular death, and hospitalization for heart failure in adults with type 2 diabetes mellitus and diabetic nephropathy with albuminuria Limitation of Use: Not recommended in patients with type 1 diabetes mellitus or diabetic ketoacidosis		3
Invokana®	As an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus		1

Agent(s)	FDA Indication(s)	Notes	Ref#
(canagliflozin) Tablet	To reduce the risk of major cardiovascular events in adults with type 2 diabetes mellitus and established cardiovascular disease To reduce the risk of end-stage kidney disease, doubling of serum creatinine, cardiovascular death, and hospitalization for heart failure in adults with type 2 diabetes mellitus and diabetic nephropathy with albuminuria Limitations of Use: • Not recommended in patients with type 1 diabetes mellitus • Not recommended for use to improve glycemic control in adults with type 2 diabetes mellitus with an eGFR less than 30 mL/min/1.73 m^2		
Jardiance® (empagliflozin) Tablet	To reduce the risk of cardiovascular death and hospitalization for heart failure in adults with heart failure. To reduce the risk of sustained decline in eGFR, end-stage kidney disease, cardiovascular death, and hospitalization in adults with chronic kidney disease at risk of progression. To reduce the risk of cardiovascular death in adults with type 2 diabetes mellitus and established cardiovascular disease. As an adjunct to diet and exercise to improve glycemic control in adults and pediatric patients aged 10 years and older with type 2 diabetes mellitus. Limitations of Use: • Not recommended for use to improve glycemic control in patients with type 1 diabetes mellitus. It may increase the risk of diabetic ketoacidosis in these patients. • Not recommended for use to improve glycemic control in patients with type 2 diabetes mellitus with an eGFR less than 30 mL/min/1.73 m^2. • Not recommended for the treatment of chronic kidney disease in patients with polycystic kidney disease or patients requiring or with a recent history of intravenous immunosuppressive therapy or greater than 45 mg of prednisone or equivalent for kidney disease.		4
Qtern® (dapagliflozin/saxagliptin) Tablet	Indicated as an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus Limitation of use: Not recommended for patients with type 1 diabetes mellitus.	DPP-4 Inhibitor Combinations	15
Segluromet® (ertugliflozin/metformin) Tablet	As an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus Limitation of use: Not for the treatment of type 1 diabetes mellitus or diabetic ketoacidosis		9

Agent(s)	FDA Indication(s)	Notes	Ref#
Steglatro® (ertugliflozin) Tablet	As an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus Limitation of Use: Not recommended in patients with type 1 diabetes mellitus		8
Steglujan® (ertugliflozin/sitagliptin) Tablet	Indicated as an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus Limitations of Use: • Not recommended for patients with type 1 diabetes mellitus • Has not been studied in patients with a history of pancreatitis.	DPP-4 Inhibitor Combinations	16
Synjardy® (empagliflozin/metformin) Tablet	As an adjunct to diet and exercise to improve glycemic control in adults and pediatric patients aged 10 years and older with type 2 diabetes mellitus Empagliflozin, when used as a component of Synjardy or Synjardy XR, is indicated in adults with type 2 diabetes mellitus to reduce the risk of: • Cardiovascular death in adults with established cardiovascular disease. • Cardiovascular death and hospitalization for heart failure in adults with heart failure. Limitations of Use: • Not recommended for use in patients with type 1 diabetes mellitus. It may increase the risk of diabetic ketoacidosis in these patients. • Because of the metformin component, Synjardy and Synjardy XR are not recommended for use in patients with heart failure without type 2 diabetes mellitus.		6
Synjardy® XR (empagliflozin/metformin) Tablet	As an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus Empagliflozin, when used as a component of Synjardy or Synjardy XR, is indicated in adults with type 2 diabetes mellitus to reduce the risk of: • Cardiovascular death in adults with established cardiovascular disease. • Cardiovascular death and hospitalization for heart failure in adults with heart failure. Limitations of Use: • Not recommended for use in patients with type 1 diabetes mellitus. It may increase the risk of diabetic ketoacidosis in these patients.		7

Agent(s)	FDA Indication(s)	Notes	Ref#
	• Because of the metformin component, Synjardy and Synjardy XR are not recommended for use in patients with heart failure without type 2 diabetes mellitus.		
Trijardy® XR (empagliflozin/linagliptin/metformin) Tablet	Indicated as an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus Empagliflozin is indicated to reduce the risk of cardiovascular death in adults with type 2 diabetes mellitus and established cardiovascular disease Limitations of Use: • Not recommended in patients with type 1 diabetes. • Has not been studied in patients with a history of pancreatitis	DPP-4 Inhibitor Combinations	17
Xigduo® XR, Dapagliflozin/metformin Tablet	As an adjunct to diet and exercise to improve glycemic control in adults and pediatric patients aged 10 years and older with type 2 diabetes mellitus. Dapafliflozin is indicated to reduce: • The risk of hospitalization for heart failure in adults with type 2 diabetes mellitus and established cardiovascular disease (CVD) or multiple cardiovascular (CV) risk factors. • The risk of cardiovascular death and hospitalization for heart failure in adults with heart failure with reduced ejection fraction (NYHA class II through IV). • The risk of sustained eGFR decline, end stage kidney disease, cardiovascular death, and hospitalization for heart failure in adults with chronic kidney disease at risk of progression. Limitations of Use: • Not recommended for use to improve glycemic control in patients with type 1 diabetes mellitus. • Because of the metformin HCl component, the use of Xigduo XR is limited to patients with type 2 diabetes mellitus for all indications. • Not recommended for the treatment of chronic kidney disease in patients with polycystic kidney disease or patients requiring or with a recent history of immunosuppressive therapy for the treatment of kidney disease. Xigduo XR is not expected to be effective in these populations.		5

CLINICAL RATIONALE

Overview	The American Diabetes Association (ADA) recommends the following guidelines:(10,11) • Healthy lifestyle behaviors, diabetes self-management education and support, avoidance of clinical inertia, and social determinants of health should be considered in the glucose-lowering management of type 2 diabetes.

© Copyright Prime Therapeutics LLC. December 2024 All Rights Reserved

	Pharmacologic therapy should be guided by person-centered treatment factors, including comorbidities and treatment goals. • In adults with type 2 diabetes and established/high risk of atherosclerotic cardiovascular disease, heart failure, and/or chronic kidney disease, the treatment regimen should include agents that reduce cardiorenal risk. • Pharmacologic approaches that provide adequate efficacy to achieve and maintain treatment goals should be considered, such as metformin or other agents, including combination therapy. • Weight management is an impactful component of glucose-lowering management in type 2 diabetes. The glucose-lowering treatment regimen should consider approaches that support weight management goals. • Metformin should be continued upon initiation of insulin therapy (unless contraindicated or not tolerated) for ongoing glycemic and metabolic benefits. A Early combination therapy can be considered in some individuals at treatment initiation to extend the time to treatment failure. • The early introduction of insulin should be considered if there is evidence of ongoing catabolism (weight loss), if symptoms of hyperglycemia are present, or when A1C levels (>10% [86 mmol/mol]) or blood glucose levels (greater or equal to 300 mg/dL) are very high. • A person-centered approach should guide the choice of pharmacologic agents. Consider the effects on cardiovascular and renal comorbidities, efficacy, hypoglycemia risk, impact on weight, cost and access, risk for side effects, and individual preferences. • Among individuals with type 2 diabetes who have established atherosclerotic cardiovascular disease or indicators of high cardiovascular risk, established kidney disease, or heart failure, a sodium–glucose cotransporter 2 inhibitor and/or glucagon-like peptide 1 receptor agonist with demonstrated cardiovascular disease benefit is recommended as part of the glucose-lowering regimen and comprehensive cardiovascular risk reduction, independent of A1C and in consideration of person-specific factors. • In adults with type 2 diabetes, a glucagon-like peptide 1 receptor agonist is preferred to insulin when possible. Healthy lifestyle behaviors, diabetes self-management, education, and support, avoidance of clinical inertia, and social determinants of health should be considered in the glucose-lowering management of type 2 diabetes. Pharmacologic therapy should be guided by person-centered treatment factors, including comorbidities and treatment goals. Pharmacotherapy should be started at the time type 2 diabetes is diagnosed unless there are contraindications. Pharmacologic approaches that provide the efficacy to achieve treatment goals should be considered, such as metformin or other agents, including combination therapy, that provide adequate efficacy to achieve and maintain treatment goals. In adults with type 2 diabetes and established/high risk of atherosclerotic cardiovascular disease (ASCVD), heart failure (HF), and/or chronic kidney disease (CKD), the treatment regimen should include agents that reduce cardiorenal risk.(11) Pharmacologic approaches that provide the efficacy to achieve treatment goals should be considered, specified as metformin or agent(s), including combination therapy, that provide adequate efficacy to achieve and maintain treatment goals. In general, higher-efficacy approaches have greater likelihood of achieving glycemic goals, with the following considered to have very high efficacy for glucose lowering: the GLP-1 RAs dulaglutide (high dose) and semaglutide, the gastric inhibitory peptide (GIP) and GLP-1 RA tirzepatide, insulin, combination oral therapy, and combination injectable therapy. Weight management is an impactful component of glucose-lowering management in type 2 diabetes. The glucose-lowering treatment regimen should consider approaches that support weight management goals, with very high efficacy for weight loss seen with semaglutide and tirzepatide.(11) Metformin is effective and safe, is inexpensive, and may reduce risk of cardiovascular events and death. Metformin is available in an immediate-release form for twice-daily dosing or as an extended-release form that can be given once daily. Compared with sulfonylureas, metformin as first-line therapy has beneficial effects on A1C, weight,

© Copyright Prime Therapeutics LLC. December 2024 All Rights Reserved

	and cardiovascular mortality. For people with type 2 diabetes and established ASCVD or indicators of high ASCVD risk, HF, or CKD, an SGLT2 inhibitor and/or GLP-1 RA with demonstrated CVD benefit is recommended as part of the glucose-lowering regimen independent of A1C, independent of metformin use and in consideration of person-specific factors. For people without established ASCVD, indicators of high ASCVD risk, HF, or CKD, medication choice is guided by efficacy in support of individualized glycemic and weight management goals, avoidance of side effects (particularly hypoglycemia and weight gain), cost/access, and individual preferences.(11) Dapagliflozin and empagliflozin have been shown to significantly reduce the risk of worsening heart failure or cardiovascular death independently of diabetes status.(2,4) Angiotensin-converting enzyme inhibitors (ACEIs), angiotensin receptor blockers (ARBs), angiotensin receptor-neprilysin inhibitors (ARNIs), funny current channel inhibitors (e.g., Corlanor), aldosterone antagonists, beta blockers, isosorbide dinitrate and hydralazine are all medications commonly used for heart failure with reduced ejection fraction (HFrEF).(12,13)
Safety	Invokamet, Invokamet XR, Segluromet, Synjardy, Synjardy XR, Trijardy XR, and Xigduo XR all have a black box warning for lactic acidosis due to their metformin component:(3,5-7,9,17) • Postmarketing cases of metformin-associated lactic acidosis have resulted in death, hypothermia, hypotension, and resistant bradyarrhythmias. Symptoms included malaise, myalgias, respiratory distress, somnolence, and abdominal pain. Laboratory abnormalities included elevated blood lactate levels, anion gap acidosis, increased lactate/pyruvate ratio; and metformin plasma levels generally >5 mcg/mL. • Risk factors include renal impairment, concomitant use of certain drugs, age more than 65 years old, radiological studies with contrast, surgery and other procedures, hypoxic states, excessive alcohol intake, and hepatic impairment. Steps to reduce the risk of and manage metformin-associated lactic acidosis in these high-risk groups are provided in the Full Prescribing Information. • If lactic acidosis is suspected, discontinue the medication and institute general supportive measures in a hospital setting. Prompt hemodialysis is recommended. Brenzavvy, Farxiga, Invokana, Jardiance, Steglatro, and Glyxambi are contraindicated in patients on dialysis.(1,2,4,8,14,19) Inpefa is contraindicated in history of serious hypersensitivity reaction to Inpefa.(18) Invokamet and Invokamet XR are contraindicated in patients with severe renal impairment, acute or chronic metabolic acidosis, including diabetic ketoacidosis.(3) Segluromet, Synjardy, Synjardy XR, Xigduo XR, and Trijardy XR are contraindicated in patients with severe renal impairment, end stage renal disease (ESRD), patients on dialysis, and patients with acute or chronic metabolic acidosis, including diabetic ketoacidosis.(5-7,9,17) Steglujan and Qtern are contraindicated in patients with severe renal impairment, end stage renal disease (ESRD), or on dialysis.(5-7,9,17)

Invokana	canagliflozin tab	100 MG ; 300 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Jardiance	empagliflozin tab	10 MG ; 25 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Qtern	dapagliflozin-saxagliptin tab	10-5 MG ; 5-5 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Segluromet	ertugliflozin-metformin hcl tab	2.5-1000 MG ; 2.5-500 MG ; 7.5-1000 MG ; 7.5-500 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Steglatro	ertugliflozin l-pyroglutamic acid tab	15 MG ; 5 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Steglujan	ertugliflozin-sitagliptin tab	15-100 MG ; 5-100 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Synjardy	empagliflozin-metformin hcl tab	12.5-1000 MG ; 12.5-500 MG ; 5-1000 MG ; 5-500 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Synjardy xr	empagliflozin-metformin hcl tab er	10-1000 MG ; 12.5-1000 MG ; 25-1000 MG ; 5-1000 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Trijardy xr	empagliflozin-linaglip-metformin tab er ; empagliflozin-linagliptin-metformin tab er	10-5-1000 MG ; 12.5-2.5-1000 MG ; 25-5-1000 MG ; 5-2.5-1000 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers

CLIENT SUMMARY – QUANTITY LIMITS

Target Brand Agent Name(s)	Target Generic Agent Name(s)	Strength	Client Formulary
Bexagliflozin ; Brenzavvy	bexagliflozin tab	20 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Dapagliflozin propanediol ; Farxiga	dapagliflozin propanediol tab	10 MG ; 5 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Dapagliflozin propanediol ; Xigduo xr	Dapagliflozin-Metformin HCl Tab ER 24HR 10-1000 MG	10-1000 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Dapagliflozin propanediol ; Xigduo xr	Dapagliflozin-Metformin HCl Tab ER 24HR 5-1000 MG	5-1000 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Glyxambi	empagliflozin-linagliptin tab	10-5 MG ; 25-5 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Inpefa	sotagliflozin tab	200 MG ; 400 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Invokamet	canagliflozin-metformin hcl tab	150-1000 MG ; 150-500 MG ; 50-1000 MG ; 50-500 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Invokamet xr	canagliflozin-metformin hcl tab er	150-1000 MG ; 150-500 MG ; 50-1000 MG ; 50-500 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Invokana	canagliflozin tab	100 MG ; 300 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Jardiance	empagliflozin tab	10 MG ; 25 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Qtern	dapagliflozin-saxagliptin tab	10-5 MG ; 5-5 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Segluromet	Ertugliflozin-Metformin HCl Tab 2.5-1000 MG	2.5-1000 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Segluromet	Ertugliflozin-Metformin HCl Tab 2.5-500 MG	2.5-500 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Segluromet	Ertugliflozin-Metformin HCl Tab 7.5-1000 MG	7.5-1000 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Segluromet	Ertugliflozin-Metformin HCl Tab 7.5-500 MG	7.5-500 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Steglatro	Ertugliflozin L-Pyroglutamic Acid Tab 15 MG (Base Equiv)	15 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Steglatro	Ertugliflozin L-Pyroglutamic Acid Tab 5 MG (Base Equiv)	5 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Steglujan	ertugliflozin-sitagliptin tab	15-100 MG ; 5-100 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Synjardy	empagliflozin-metformin hcl tab	12.5-1000 MG ; 12.5-500 MG ; 5-1000 MG ; 5-500 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Synjardy xr	Empagliflozin-Metformin HCl Tab ER 24HR 10-1000 MG	10-1000 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers
Synjardy xr	Empagliflozin-Metformin HCl Tab ER 24HR 12.5-1000 MG	12.5-1000 MG	Commercial ; HIM 5 and 6 Tiers ; HIM 7 Tiers

STEP THERAPY CLINICAL CRITERIA FOR APPROVAL

Module	Clinical Criteria for Approval
All other target agent(s)	**TARGET AGENT(S)** **Brenzavvy, Bexagliflozin** **Glyxambi** (empagliflozin/linagliptin) **Invokana** (canagliflozin) **Invokamet** (canagliflozin/metformin) **Invokamet XR** (canagliflozin/metformin ER) **Qtern** (dapagliflozin/saxagliptin) **Segluromet** (ertugliflozin/metformin) **Steglatro** (ertugliflozin) **Steglujan** (ertugliflozin/sitagliptin) **Synjardy** (empagliflozin/metformin) **Synjardy XR** (empagliflozin/metformin ER) **Trijardy XR** (empagliflozin/linagliptin/metformin ER) **Xigduo XR, Dapagliflozin/metformin ER** **Target Agent(s)** will be approved when ONE of the following is met: 1. The patient is currently being treated with the requested SGLT inhibitor within the past 90 days **OR** 2. The prescriber states the patient is currently being treated with the requested SGLT inhibitor within the past 90 days AND is at risk if therapy is changed **OR** 3. The patient's medication history includes use of an agent containing metformin or insulin in the past 90 days **OR** 4. The patient has an intolerance or hypersensitivity to ONE of the following agents: metformin or insulin **OR** 5. The patient has an FDA labeled contraindication to ALL of the following agents: metformin and insulin **OR** 6. The patient has a diagnosis of type 2 diabetes with or at high risk for atherosclerotic cardiovascular disease, heart failure, and/or chronic kidney disease **Length of Approval:** 12 months NOTE: If Quantity Limit applies, please refer to Quantity Limit Criteria.
Farxiga	**TARGET AGENT(S)** **Farxiga, Dapagliflozin** **Target Agent(s)** will be approved when ONE of the following is met: 1. The patient is currently being treated with the requested SGLT inhibitor within the past 90 days **OR** 2. The prescriber states the patient is currently being treated with the requested SGLT inhibitor within the past 90 days AND is at risk if therapy is changed **OR** 3. The patient has a diagnosis of heart failure **OR** 4. The patient has a diagnosis of type 2 diabetes with or at high risk for atherosclerotic cardiovascular disease, heart failure, and/or chronic kidney disease **OR** 5. The patient has a diagnosis of chronic kidney disease (CKD) **OR** 6. The patient's medication history includes use of an agent containing metformin, insulin, ACE inhibitors, angiotensin receptor blockers (ARBs), angiotensin receptor-neprilysin inhibitors (ARNIs), If channel inhibitors (e.g., Corlanor), aldosterone antagonists, beta blockers, isosorbide dinitrate or hydralazine in the past 90 days **OR**

Module	Clinical Criteria for Approval
	7. The patient has an intolerance or hypersensitivity to ONE of the following agents: metformin or insulin **OR** 8. The patient has an FDA labeled contraindication to ALL of the following agents: metformin and insulin **OR** 9. The patient has an intolerance or hypersensitivity to ONE of the following agents: ACE inhibitors, angiotensin receptor blockers (ARBs), angiotensin receptor-neprilysin inhibitors (ARNIs), If channel inhibitors (e.g., Corlanor), aldosterone antagonists, beta blockers, isosorbide dinitrate, or hydralazine **OR** 10. The patient has an FDA labeled contraindication to ALL of the following agents: ACE inhibitors, angiotensin receptor blockers (ARBs), angiotensin receptor-neprilysin inhibitors (ARNIs), If channel inhibitors (e.g., Corlanor), aldosterone antagonists, beta blockers, isosorbide dinitrate, and hydralazine **Length of Approval:** 12 months NOTE: If Quantity Limit applies, please refer to Quantity Limit Criteria.
Jardiance and Inpefa	**TARGET AGENT(S)** **Jardiance** (empagliflozin) **Inpefa** (sotagliflozin) **Target Agent(s)** will be approved when ONE of the following is met: 1. Information has been provided that indicates the patient is currently being treated with the requested SGLT inhibitor within the past 90 days **OR** 2. The prescriber states the patient is currently being treated with the requested SGLT inhibitor within the past 90 days AND is at risk if therapy is changed **OR** 3. If the requested agent is Jardiance, then BOTH of the following: A. The patient has a diagnosis of chronic kidney disease (CKD) **AND** B. The patient is at high risk for progression of CKD, including, risk of sustained decline in eGFR, end-stage kidney disease, cardiovascular death, and hospitalization **OR** 4. The patient has a diagnosis of heart failure **OR** 5. The patient has a diagnosis of type 2 diabetes with or at high risk for atherosclerotic cardiovascular disease, heart failure, and/or chronic kidney disease **OR** 6. The patient's medication history includes use of an agent containing metformin, insulin, ACE inhibitors, angiotensin receptor blockers (ARBs), angiotensin receptor-neprilysin inhibitors (ARNIs), I_f channel inhibitors (e.g., Corlanor), aldosterone antagonists, beta blockers, isosorbide dinitrate or hydralazine in the past 90 days **OR** 7. The patient has an intolerance or hypersensitivity to ONE of the following agents: metformin or insulin **OR** 8. The patient has an FDA labeled contraindication to ALL of the following agents: metformin and insulin **OR** 9. The patient has an intolerance or hypersensitivity to ONE of the following agents: ACE inhibitors, angiotensin receptor blockers (ARBs), angiotensin receptor-neprilysin inhibitors (ARNIs), I_f channel inhibitors (e.g., Corlanor), aldosterone antagonists, beta blockers, isosorbide dinitrate, or hydralazine **OR** 10. The patient has an FDA labeled contraindication to ALL of the following agents: ACE inhibitors, angiotensin receptor blockers (ARBs), angiotensin receptor-neprilysin inhibitors (ARNIs), If channel inhibitors (e.g., Corlanor), aldosterone antagonists, beta blockers, isosorbide dinitrate, and hydralazine **Length of Approval:** 12 months NOTE: If Quantity Limit applies, please refer to Quantity Limit Criteria.

QUANTITY LIMIT CLINICAL CRITERIA FOR APPROVAL

Module	Clinical Criteria for Approval
Universal QL	**Quantity limit for the Target Agent(s)** will be approved when ONE of the following is met:

© Copyright Prime Therapeutics LLC. December 2024 All Rights Reserved

Module	Clinical Criteria for Approval
	1. The requested quantity (dose) does NOT exceed the program quantity limit **OR** 2. The requested quantity (dose) exceeds the program quantity limit AND ONE of the following: A. BOTH of the following: 1. The requested agent does NOT have a maximum FDA labeled dose for the requested indication **AND** 2. There is support for therapy with a higher dose for the requested indication **OR** B. BOTH of the following: 1. The requested quantity (dose) does NOT exceed the maximum FDA labeled dose for the requested indication **AND** 2. There is support for why the requested quantity (dose) cannot be achieved with a lower quantity of a higher strength that does NOT exceed the program quantity limit **OR** C. BOTH of the following: 1. The requested quantity (dose) exceeds the maximum FDA labeled dose for the requested indication **AND** 2. There is support for therapy with a higher dose for the requested indication **Length of Approval:** up to 12 months
